

Anaël Wünsche – ARIEL-FRANCE Janvier 2024

TITLE: Exoclock-France: Learning practical photometry for amateurs in France with the Exoclock-ARIEL project.

SUMMARY:

Within the context of the private observatory of Baronnies Provençales, we developed a long-term implication into citizen science in photometry. We present here our school center of observational and practical astronomy for amateur astronomers. We show here some results within the Exoclock project as a representant of the French amateur community and want to enhance and strengthen our bond for the next great projects for discovering and characterizing exoplanets with ground bases amateur photometry.
